- Optiv
- Guidepoint Security

Experts in data governance, InfoLock provides consulting and advisory services that help organizations effectively secure, manage, and optimize their data. We help clients regain control of their data with our deep understanding of risk management, combined with technical expertise, and business acumen.

As thought leaders in Data Protection, InfoLock developed the Data Risk Management Framework (DRMF), which enables organizations to understand and manage data risk in the same manner as other organizational risks, such as financial, competitive, and regulatory risk.

Founded in 2005 and headquartered in Arlington, VA, InfoLock is the go-to data management advisory firm for security-conscious organizations in the financial services, healthcare, insurance, retail, manufacturing, and public sectors.

SERVICES & SOLUTIONS

Solution Critical Care (SCC)

White-glove advanced support for Broadcom solutions including DLP, CASB, Web Proxy, and Endpoint. Along with incident troubleshooting, this boutique offering also includes solution health checks and upgrades, subject matter expertise for architecture & design and policy optimization, quarterly/annual business reviews, and a dedicated Support Manager.

Advisory Services

Infolock's Advisory Services provide expert guidance to help address the challenges associated with regulatory compliance, exponential growth, & effective risk reduction.

Data Risk Management Framework (DRMF)

Infolock's DRMF is an industry-recognized data security best practice. A comprehensive and scalable framework, the DRMF deconstructs data security into three controls: Governance, Visibility, and Protection, with measurable sub-controls to assess your organization against. This provides insight to help mature data security programs and reduce risk.

Data Risk Management & DLP Program Development

By leveraging Infolock's DRMF, the Advisory Services team can build out meaningful programs that identify risks before they occur, determine whether risks are technical or business issues, prioritize risk reduction, and ensure strategic alignment across business units.

Data Inventory & Classification

A Data Inventory answers the foundational questions of "what," "where," and "how much" data you have. Through three key objectives, your organization discovers the location, volume, and risk associated with data, while a proper Classification Schema allows the organization to organize data into meaningful categories.

Health Assessments

Organizations often have either overlaps or gaps in their technologies. This leads to leveraging multiple solutions to perform tasks, creating unnecessary complications. A Health Assessment can help the organization identify what they already have, their current capabilities, and if there are gaps, while also highlighting which potential solutions can perform needed tasks.

Managed Services

Infolock's Managed Services encompasses multiple technologies including DLP, CASB, Web Proxy, & Endpoint, & "Managed Programs" for Information Governance.

Managed DLP (MDLP)

Infolock's MDLP services remove the barriers to building and maintaining an effective data security program by providing full management of your organization's DLP, CASB, Classification, and Encryption solutions. Infolock's MDLP offering includes incident response, administration, and program management.

Professional Services

Effective solution deployments require careful consideration to properly design, architect and implement complex enterprise software. Professional Services is Infolock's division of Engineers and Architects, who work in tandem to ensure your organizational solutions are deployed to protect what matters most.

Implementation, Integration, Configuration, & Training

Every member of our team specializes in both implementing and configuring multiple categories of information security products across cloud, on-premise, and hybrid environments. Infolock also provides advanced training on solution functionality.

Value Added Reseller & Appliance Solutions

Infolock provides full sales-cycle management, from first meeting through POC to close, and beyond. Infolock also offers a purpose-built DLP appliance accompanied by 24x7 support.
